ABOUT SUMMIT HEALTHCARE

Summit Healthcare delivers the right results- first time, every time, guaranteed. Offering a powerful technology platform with proven industry experience, Summit Healthcare is the smart choice for taking control of your healthcare systems integration and automation needs.

Summit Healthcare has never been about one size fits all solutions. We take pride in always providing a truly consultative approach, one that includes understanding our clients' needs first. Client success is our driving force. We're constantly doing the little things that make the difference in our clients' success. Maybe that's why our client retention rate is an astounding 98%.

INNOVATIVE

INTELLIGENT

DEPENDABLE

SECURE

CONSISTENT

Our History...

Established in 1999, Summit initially focused on migrating clients from their existing information systems to new system environments. Summit introduced the concept of System Process Management to healthcare system conversions, and brought an affordable, yet complete data management plan that let clients focus on their new applications, rather than on the tedious and time consuming details of data conversions.

Eleven years ago, Summit Healthcare complemented the data conversion services and developed a comprehensive product suite to tackle integration, automation, business continuity and dictionary management. Our focus on innovation continues today and we look forward to a long and prosperous future helping hospitals achieve their goals.

Summit HEALTHCARE

Integration

The Summit Exchange Platform

Simplify all of your data exchange processes with one platform.

www.summit-healthcare.com

Intuitive Efficient Secure

Ensure efficient and secure connectivity for any integration challenges hospital enterprises might face.

Integrated HISP
Supports Direct Messaging

Supported Standards
Include but are not limited to:

- XCA - Cross-Community Access
- XCPD - Cross-Community Patient Discovery
- XDM - Cross-Enterprise Document Media Interchange
- XDR - Cross-Enterprise Document Reliable Interchange
- XDS.b – Document Repository
- PIX – Patient Identifier Cross Referencing
- PDQ – Patient Demographics Query
- XDS.b – Document Consumer (includes Async)
- ATNA Security – Audit Trail and Node Authentication

Web Services Integration

Flexible Interface Mapping & Filtering
The Summit Mapper, complete with mapping wizard, provides total control over your interface environment.

Simplify Data Exchange Processes

The Summit Exchange Platform is Summit Healthcare's newest solution for an ever evolving community. The platform aides integration problem solving in a more powerful, efficient and resilient way.

- *Utilize SOA for message handling, engine execution, security, and application management*
- *Deployments manage your interfaces which can be split off if necessary to balance processing*

Enhance your data exchange not only within your hospital's walls, but throughout your community. Summit Exchange has the ability to connect disparate health care information systems, enabling fast and secure Direct Messaging using XDR protocols.

Summit Exchange ensures that Continuity of Care Documents are shared in a timely manner between the hospital and clinics, physicians' practices, rehabilitation centers and other entities that comprise a community health network. These levels of connectivity result in a more streamlined continuity of care, in keeping with Meaningful Use data exchange goals and objectives.

- *Unlimited Connection Points*
- *Scalable for Future Initiatives*
- *Advanced Performance Handling*

Scalability

• Utilizes SOA for message handling, engine execution, security, and application management.

• Deployments are used to manage your interfaces which can be split off if necessary to balance processing should you begin reaching the server thresholds.

Monitoring & Alerting

- ***Manage alerting within each component for:***
  - Queue size
  - Errors
  - Connectivity
- ***System wide alerting on thresholds for:***
  - Disk space
  - Memory Usage
  - Server Shutdowns
  - Service Errors
- ***Alerts can be configured to notify specific individuals via text, email, or page.***

Message Formats & Connection Options

- ***Supported Message Types:***
  - HL7 v2 and v3
  - XML/SOAP/Multipart
  - Plain Text
- ***Connection Options:***
  - Database
  - Direct Messaging
  - SMTP
  - TCP/IP
  - HTTP/HTTPS
  - File
  - FTP/SFTP/FTPs

Intelligent Exchange

Intelligently share and receive care information to support your patient safety and outcome objectives.

Maximize Reimbursements
Support your reimbursement goals through real-time data exchange.

Grow with your Community
Be able to expand and grow based on your unique community needs.
